Install AutoIt v3.01 Close Autocad and then open it. Add Autocad.exe and Autocad.dll to the same directory where you have placed AutoIt.exe. Right click Autocad.exe and add the option to run as administrator Run AutoIt Open the file which you want to crack Open Autocad and go to Mesh tab > Preset Objects > Select objects you want to open or Export Select objects you want to export in your file and save. Go back to AutoIt.exe and click Keygen. Select "Create New Keygen" Go to check "Change all DLLs to 64bit" and then save the new file and close it. Open Autocad and go to Mesh tab > Preset Objects > Paste the exported files. Workflow This will mostly work if you do the following steps for each file. Make a copy of the file (ie. myfile.r32) Open the file with a Hex editor. Find the end of the CARTB or DTBL or F0P file. This will be some sort of reference to the TBL or DBL file Find where it starts (also known as the offset) in the file. Open the CARTB, DTBL or F0P with the Hex editor and scroll down until you find the start of the TBL or DBL file Locate the start and end of the TBL or DBL file (Usually the first 2 bytes) You should be able to find your desired file in the hex editor in all its glory Open the File that you saved with Autocad and export the mesh. This may not work if you have a CARTB with a corrupted mesh, the file will not show up in your exported file. If you really need to solve this issue you can use the tool for free download from Notes My suggestion is to use the keygen I created. You will need to save the keygen in the same directory as where the Autocad exe file is. Don't forget to add "Run as Administrator" on the options. Some files may have a different extension to the ones I used. I don't recommend you to break the mesh. You may get a blank file instead of your file. Problems
