Withaferin A attenuates cisplatin-induced cell death through inhibiting the mTOR signaling pathway. Withaferin A (WFA) isolated from Withania somnifera, is considered to be an important drug for fighting against cancer as it has exhibited potential activities

against various solid tumors. However, its role in cancer drug resistance is not clear. Herein we reported that WFA reduced the resistance of colorectal cancer cells to cisplatin (Cis). Further study revealed that WFA enhanced the sensitivity of Cis by suppressing the phosphorylation of 4E-BP1 and p70S6K1 and the expression of Bcl-2 and Survivin. In addition, inhibition of mTOR reversed the effects of WFA on the chemosensitivity of Cis. These data suggest that WFA enhances the Cis-induced cytotoxicity by suppression of mTOR signaling pathway in colorectal cancer cells.

By David Travis-Giles BBC News, Denver, US Walmart is being criticised by climate campaigners as it continues to invest in its fossil fuel-powered fleet Diesel engines, which produce unwanted nitrogen oxides (NOx), are set to become the most common form of fuel in US local stores after rival Wal-Mart added them to its more popular tank, petrol or kerosene, on the advice of local officials. Walmart operates 110,000 diesel trucks that run in 29,000 stores, and a further 24,000 trucks that run in a different set of stores. Wal-Mart confirmed plans to switch a small number of vehicles to run on diesel. At a meeting of the coalition of environmental and social justice groups, Walmart said it had decided that less than 10 per cent of its fleet of 6,000 diesel-fueled, fuel stations would be converted from kerosene to diesel, and that the change would take place slowly over the next few years.
